

BADRI NARAYANAN

Computer Science Engineer | AI/ML & Data Analyst Fresher | 2025 Graduate

📞 9342025898 | ✉ badri2002narayanan@gmail.com | 📍 Chennai, Tamil Nadu | [LinkedIn: linkedin.com/in/badri-narayanan](#) | [GitHub: github.com/badri-narayanan](#)

CAREER OBJECTIVE

Results-driven Computer Science fresher (2025) with hands-on experience in Python, SQL, Machine Learning, and AI/ML project development. Proficient in Natural Language Processing (NLP), data analysis, and building intelligent automation systems. Seeking a Junior Developer, Data Analyst, or AI/ML Engineer role where I can leverage my technical expertise in Python, machine learning, and data visualization to deliver impactful solutions.

TECHNICAL SKILLS

Programming:	Python, SQL, HTML, CSS
AI / ML:	Machine Learning, NLP, Scikit-learn, TensorFlow (basics), Pandas, NumPy, LangChain (basics)
Data Tools:	Power BI, MS Excel (Advanced), Data Visualization, Dashboard Design
Databases:	SQLite3, MySQL
Frameworks:	CustomTkinter, Flask (basics)
Dev Tools:	Git, GitHub, VS Code, Jupyter Notebook, Google Colab
Soft Skills:	Problem Solving, Analytical Thinking, Team Collaboration, Volunteering

PROJECTS

AI-Powered Resume Screener & Candidate Ranking System *Python | NLP | Machine Learning | 2025*

- Designed and built an end-to-end intelligent recruitment tool using Python, NLTK, and Scikit-learn that automatically parses resumes and scores them against job descriptions using TF-IDF vectorization and cosine similarity.

- Engineered a multi-factor ranking algorithm that extracts and weights skills, experience, and keyword density — reducing manual screening effort by ~70% and improving shortlisting accuracy.
- Deployed a Flask web application enabling HR users to upload job descriptions and instantly view ranked candidate profiles with match percentage scores and skill gap analysis.
- Persisted candidate data and screening history in SQLite3; used Pandas for data preprocessing and NumPy for similarity computations across 500+ resume records.
- Tech Stack: Python, NLTK, Scikit-learn, TF-IDF, Cosine Similarity, Flask, Pandas, NumPy, SQLite3, HTML/CSS

Sales Forecasting & Business Intelligence Dashboard *Python | ML | Power BI | SQL | 2025*

- Built a full machine learning pipeline in Python using Scikit-learn (Linear Regression + Random Forest) to forecast monthly sales from 2+ years of historical business data, achieving 88% prediction accuracy.
- Performed end-to-end data wrangling with Pandas and NumPy — handling missing values, engineering seasonality and trend features, and normalizing product category data for model input.
- Designed an interactive Power BI dashboard with dynamic KPIs, drill-down filters, and forecasted vs. actual sales comparisons, enabling data-driven decisions for business stakeholders.
- Automated data refresh pipeline using SQL queries and Python scripts, reducing manual reporting time from 4 hours to under 10 minutes per week.
- Tech Stack: Python, Scikit-learn, Pandas, NumPy, Power BI, SQL, SQLite3, MS Excel, Matplotlib

EDUCATION

B.E. Computer Science Engineering *2022 – 2025*

Chendhuran College of Engineering & Technology

CGPA: 7.88 / 10.0

Diploma – Electrical & Electronics Engineering *2019 – 2022*

Chendhuran Polytechnic College

CGPA: 8.50 / 10.0

10th Standard – Secondary School Certificate *2019*

Christhuraja Matric School

CERTIFICATIONS

- Creators of Metaverse Student Program – Meta (Facebook)
- Power BI for Data Analysts – Udemy
- Python Programming Fundamentals – (add platform e.g. Coursera / NPTEL)
